The IMRR is composed of track of the former Chicago & Illinois Midland Railway, which started back in 1889. The reason the IMRR was created was to supply coal shipments for power plants for that Region, thus stimulating the economy. The shortline has now grown to ship a wide variety of commodities that include: agricultural products, building materials, minerals and municipal and industrial waste. The IMRR was acquired by Genesee & Wyoming Inc. in 1996. In 2010, the President's Award for best safety from the American Short Line and Regional Railroad Association was given to the IMRR.
